

## Nanobubble Solutions to Improve Lake & Pond Water Quality

# 24/7 REMOTE MONITORING

Your lake's water quality varies throughout the day, day-to-day, weekly & monthly due to weather and seasonally due to climate. Monitoring these fluctuations is vital to understanding your lake's behavior and for planning and evaluating your lake management activities. Moleaer has developed a turnkey monitoring solution that collects data in real time to realize these variations and allow you to watch your lake be transformed after the installation of your nanobubble generator.

### A fundamentally better approach to lake management

Our buoys can be connected directly to your nanobubble generator dashboard allowing you to monitor your equipment and your lake right from your phone or laptop from anywhere in the world.

For more information, including pricing, ask your sales representative or reach out to [info@moleaer.com](mailto:info@moleaer.com).

### OUR TURNKEY MONITORING BUOY INCLUDES:

- ✓ 12" buoy and anchor with rope
- ✓ Telemetry - antenna sends data via 5G cellular
- ✓ Rugged twist-lock cable (up to 25')
- ✓ AquaTroll 500 multiparameter sonde
- ✓ Measures: dissolved oxygen (DO), temperature & conductivity, and pH & oxidation reduction potential (ORP)
- ✓ Automatic sensor wiper
